## Challenge

Consultimate Solutions wanted us to create a mobile-friendly app that helps enterprise retailers, business owners, and finance professionals to validate large volumes of business records for VAT authorization. The client needed a comprehensive IT solution that securely manages and processes business data, and makes validated documents available for use.

Member of:

## Solution

Pixel Solutionz designed a mobile-friendly app that helps users, especially VAT Managers and Master Data Process owners, to validate EU VAT identification numbers of companies across the European Union. The Bulk VAT Check system cleans your raw data, re-formats to the up-to-date naming or numbering conventions for certain member states.

We made sure the micro tool is capable of handling about 25K to 30K records in a single session. The users can also download their Validation Request Output file directly from the page along with the VIES official Consultation Number, once the validation process is completed. In addition, VAT Check system displays a report at the end of the process, a brief analysis of the records that you requested for validation.

## Benefit

The VAT Check system is designed for large enterprises with humongous data volume, helping them cleanse their Supplier & Customer Master Data with their latest VAT IDs. Such data are business-critical and used for the preparation of corporate VAT returns, Intrastat reporting, etc.

Pixel Solutionz helped Consultimate Solutions come up with a smart and robust tool that takes care of large volume of confidential business data, cleansing them for validation and makes validated documents available for use, improving business processes for optimal performance.
